

ZERO CARBON SOLUTIONS

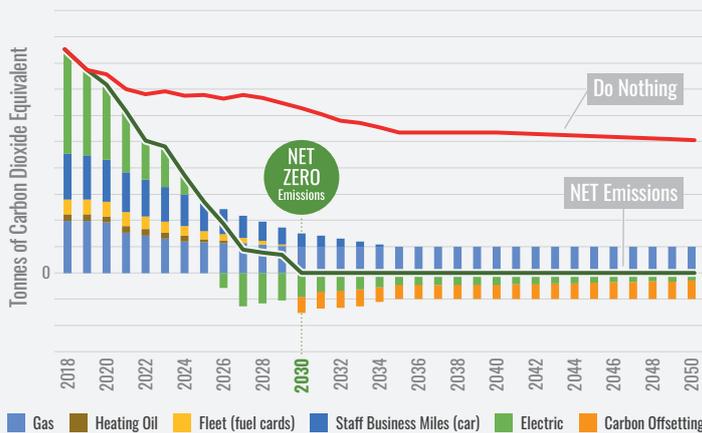

Have you declared a Climate Emergency? Do you have a carbon net zero target? Would you like assistance in achieving your goals? Then look no further than LASER's tailor-made support and OJEU compliant frameworks.

Here are three steps to place you on the right path:

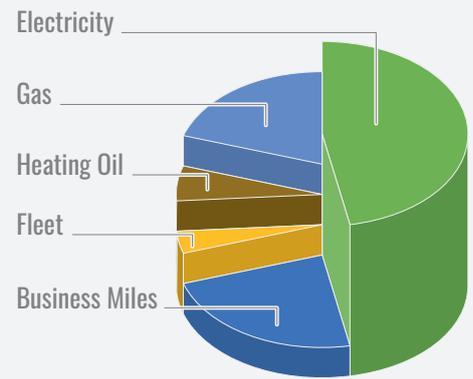

1 Carbon Footprint and Forecast

LASER will work with you to determine which emissions sources to include within your net zero project. Once this is complete LASER can generate your carbon footprint and forecast emissions through to your carbon net zero target date.

Example emissions forecast with planned actions

Example of a local authority's carbon footprint

2 Options Appraisal

LASER can present a range of options to help you reduce your carbon emissions (see services available overleaf). We will work with you to identify the most beneficial combination of carbon saving options to meet your targets and preferences and model the impacts of these projects and initiatives.

3 Carbon Descent Plan

In a substantive document, LASER will set out a full action plan to take your organisation from the current position to net zero by your target date, including high level costing and financial benefits.

Ongoing support →

Ongoing Support

LASER can support our customers throughout their journey from the initial planning stages, to the delivery of carbon saving projects and ongoing review and revision of the strategy, right through to the attainment of their net zero goals.

LASER's Approach

Why LASER?

- **Experience** – LASER has extensive experience in assisting our wide public sector customer base to reduce, monitor and report on their ongoing consumption of energy and related carbon emissions.
- **Compliant Route to Market** – LASER has a number of OJEU compliant frameworks in place to assist our customers in delivering carbon reduction projects and initiatives. We are adding other frameworks to ensure our customers are always able to capitalise on the evolving industry.
- **Existing Relationship** – for most customers we already have access to your energy data, plus we can build costs for Zero Carbon Services and projects in to your energy bills.
